## How to tie a stop knot

### Step 1

Take a length of Power Gum and form it into a loop alongside the mainline.

### Step 2

Pass one end of the Power Gum through the loop, and around the mainline, four times. Moisten the Power Gum and pull both free ends to tighten the stop knot.

### Step 3

Leave the free ends about one inch (2.5cm) long or the stop knot won't pass through the rod rings easily. Always moisten the knot before sliding it along the line to alter the depth of the float.
